Simberian News: January 7, 2020

«GreetingLine»

Here is an update on what is new at Simberian:

Simbeor SDK 2020 update release is now available with API to all Simbeor solvers and tools for C/Matlab/Python. This is the industry-first electromagnetic signal integrity analysis automation kit that can be used for machine learning and design automation applications – click here to learn more. **Simbeor SDK has advanced verifiably-accurate interconnect models and further increases productivity of SI engineers with scripting.**

Simbeor THz 2020 beta version is now available for customers and trials. It has multiple improvements in Board Analyzer, Via Analyzer, TLine Wizard,… – click here to learn more.

Simbeor THz or SDK and COM scripts is actually all you need to design serial interconnects – see demo #2019_07. It provides the least expensive yet accurate solution for systems up to 112Gbps – see prices in the new order form at www.simberian.com

Things to do at the oncoming DesignCon 2020 - visit our booth #501 for **Simbeor 2020 demo**. Do not miss **tutorial** Design Insights from Electromagnetic Analysis & Measurements of PCB & Packaging Interconnects Operating at 6- to 112-Gbps & Beyond and **presentation** Machine Learning Applications for COM Based Simulation of 112Gb Systems, demonstrating design space exploration with the Range Analysis using Intel's EVA software and Simbeor SDK for automated analysis of tens of thousands of chip to chip links.

For more information on product pricing and availability or demo, contact Simberian at info@simberian.com.

Happy 2020! And we hope to see you at DesignCon,
Team Simberian
