

## Simberian News: June 3, 2016

«GreetingLine»

Here is an update on what is new at Simberian. We have released a few updates of **Simbeor THz** with mostly small incremental improvements and bug fixes – [here is the update log](#). We hope that you have a chance to try or see new features in Simbeor THz, such as new post-layout DeComposer tool in Board Analyzer, Eye Analyzer, ICN Analyzer and new 3DTF solver. If not, give it a try or [see the latest demo-videos](#). We are now working on parallelization of Simbeor solvers on a cluster, acceleration of 3DTF solver and full support for IPC's SPP material model identification technique.

**Unique field visualization capabilities in 3DTF solver** are useful to understand the signal propagation in interconnects. It was so fun to watch and learn from it that we decided to start new series of educational videos “**How Interconnects Work...**” – see them at [demo video section of our web site](#) or at [Simbeor channel on YouTube](#). Have some fun learning the electromagnetics!

If you missed our “**Material World...**” **DesignCon2016 tutorial** on broadband modelling of composite PCB/package dielectrics and conductor roughness, manufacturing aspects and material model identification with multiple practical examples, slides can be now downloaded from [the technical presentation section of our web site](#) – it is #2016\_01.

For more information visit [www.simberian.com](http://www.simberian.com) or contact Simberian at [info@simberian.com](mailto:info@simberian.com) or +1-702-876-2882. Our main office is now located in beautiful Westlake Village, CA. It was too gloomy in Seattle, too hot in Las Vegas and looks like just right here in Westlake Village ☺

**Happy Summer Days,  
Team Simberian**
