Simberian News | October 4, 2010
…from Simberian Inc.
Welcome to the latest edition of Simberian News!

Simbeor 2011 is coming…
If you did not hear from us for a while, there is a good reason for that - we are super-busy developing Simbeor 2011, the next version of the industry-first electromagnetic signal-integrity software. It has a host of new tools and features, is much faster and more accurate, and will be licensed with the same prices!

Here are the highlights of the upcoming pre-release:
- Available as a 64-bit application to handle larger boards and problems
- New N^2 massively parallelized electromagnetic analysis in Simbeor 3DML to solve larger problems an order of magnitude faster and more accurately
- Simbeor Rational Compactor™ tool is parallelized to accelerate all macro-modeling tasks
- New graphical network editor with linear elements to simulate interconnects
- New measurement-validated causal Nickel model for precise characterization of ENIG plated traces
- New configurations in via-hole and transmission line wizards
- Import of board geometry from PADS layout files

Pre-release of Simbeor 2011 will also include the industry-first macro-modeling automation tool Simbeor Touchstone Analyzer™. It will automatically find all your Touchstone models, estimate and visualize quality metrics of the models, quickly plot data from selected files, build macro-models for groups of selected Touchstone files and convert them into either broad-band SPICE macro-models or back into improved Touchstone models.

Pre-release of Simbeor 2011 is scheduled for November 15, 2010 for customers only. All customers will get free additional licenses of Simbeor 2011 with the existing licensing terms. The final release will have more tools and features and is scheduled for January 31, 2011. **If you purchase a license of Simbeor 2008 before the final release of the new version, you will get an additional license of Simbeor 2011 for free with the same licensing terms.**

<u>**Our customer says that**</u> "*The more I use the tool, the more I love the way how the menus are constructed and the dependencies are built in.*" <u>Click here to see the licensing options</u>. <u>Download and try Simbeor today</u>, or let us know if you would like to have an overview and demo of Simbeor at your company site or over the internet.

Sincerely,
Team Simberian
